

\$s*/tonne carbon EFFICIENCY RANKINGS for 1990

This graphic compares the dollar/tonne "EFFICIENCY" for 120 countries in 1990. Dollars (INCOME) are adjusted to "Purchasing Power Parity" (PPP). Tonnes (IMPACT) are of carbon from CO2 from fossil fuel burning. INCOME per capita is shown on the yellow line. IMPACT per capita is shown on the red line. EFFICIENCY is the ratio between INCOME and IMPACT and international rankings are shown in the line of flags. The trend in the graphic shows that poor countries are much more efficient than rich countries.
